**Subject:** emergency response

After our discussion with Patrick Longmire, Liberty Hydro has developed a plan for emergency response to help with the management of the spill at the Gold King Mine.

We understand that the EPA is building containment ponds to hold the water for treatment prior to release. Liberty Hydro ZVI Blue technology can be employed at these containment ponds to treat the water to remove TSS, adjust pH and eliminate heavy metals allowing for a clean release of water. Our system is completely modular and transportable and requires no power, depending on terrain, to operate.

Our team is prepared to meet with you to discuss a long term response to the situation and to treat future waters that will continue to be released from these abandoned mines.
